

Software Security Solutions launches Webroot's Spy Sweeper Anti-Spyware Products

FOR IMMEDIATE RELEASE:

LAKEWOOD, CO. August 1, 2005 – In recognition of the importance of combating internet security threats and protecting consumer and business data, Software Security Solutions is pleased to announce a partnership with Webroot Software of Boulder, Colorado. With the addition of Spy Sweeper Anti-Spyware for consumers and Spy Sweeper Enterprise Edition for businesses, Software Security Solutions has added a quality layer to its Layered Security Model.

Webroot's Spy Sweeper adds to the layered software solution for computer and network security by detecting, removing and blocking spyware threats that are a major source of identity theft. Anti-spyware in combination with a solid anti-virus protection package and a firewall protect home and business computers from data theft as well as incoming infections that can slow and crash applications and operating systems.

A three-time recipient of PC Magazine's Editors' Choice Award, Webroot Spy Sweeper has accrued an installed base of more than 10 million users since the product's debut in 2002.

About Webroot:

Webroot Software, Inc., a privately held company based in Boulder, Colorado, with offices worldwide, creates innovative Internet security products and services for millions of customers in 223 countries, ranging from enterprises to small businesses and home users.

Founded in 1997, the company provides best-of-breed Internet security solutions that protect personal information and corporate assets from online and internal threats. Webroot's Internet security programs consistently receive top ratings and recommendations by respected third-party media and product reviewers. Webroot currently has 300 employees worldwide.

Webroot has a long and successful history of partnering with both large and small companies around the globe to extend enhanced Internet security to customers worldwide. A unique blend of agility, creativity and flexibility has enabled Webroot to form mutually rewarding relationships with these organizations.

About Software Security Solutions:
