

Software Security Solutions is Formed

Lakewood, CO June 2002 - Software Security Solutions is formed as DBA from TTC LLC, moving the company from purely consultation and network design to a single source provider of computer and Internet security software. The company will now provide layered security solutions for consumers and small to mid-sized businesses.

The Mystery of Security – as the threat of security becomes more apparent in the technological world, the question of how to protect the market known as SOHO (small office and home office) and consumer users is a need that Software Security Solutions will meet. The “mystery” about computer security needs to be simplified for the common user. Software Security Solutions fills the gap by providing solutions through a layered security model. Our security categories include Security Information, Anti-Virus software, Spyware Removal software, Firewalls, Spam Blocker software, Backup solutions, and Content Filtering software. These categories provide the security tools needed for complete computer protection.

The Concept - Founder and CEO Monte Robertson explains, “Large companies, typically over one-thousand employees have their own computer security technicians. Small businesses and individuals don’t have that luxury. My goal is to simplify computer security for these folks. The bottom-line is; we all have access to the same tools. The solutions available to IBM are pretty much the same solutions available to the local small business owner. There is no “panacea”, or ‘silver bullet’

in computer security. Computer users need a layered security solution for the best protection and we intend to provide them with assistance, information and products to achieve that.”

About Software Security Solutions:

Software Security Solutions provides a single point of contact with products and information to support layered computer and network security needs.
